

COMMERCIAL CASE STUDY CNC TRAINING FACILITY.

Project Summary

This project included the preparation and painting of ceilings, walls, plasterboards and blockwork substrates including lots of high level works from MEWPS and scaffold access. Woodwork was provided with a satin finish in contrasting colours and then painting to all walls, and ceilings was carried out by airless spray, brush and roller. Metal staircases were also painted with a metal shield finish. We also painted the plantroom floors with a single pack floor paint. We prepared and coated up all of the floors in the 50 metre and 100 metre firing ranges including the demarcations. The floors were first given a vacuum controlled diamond grind and shot blasted prior to the application of anti slip floor coating products

This was a highly confidential and secure site and materials were required to be stored in a controlled way by locking in a secure area.

Key Facts

Project Name	CNC Training Facility
Client	Morgan Sindall
Service	Decoration to New Cumbria Nuclear Constabulary Training Facility
Length of Contract	10 months

Carlisle Office

Head Office, Brunthill Road, Kingstown Industrial Estate, Carlisle CA3 0EH T: 01228 404 114
