

EDUCATION CASE STUDY

UNIVERSITY OF EDINBURGH

DATA TECHNOLOGY

INSTITUTE (DTI).

Project Summary

Using Johnstone's traded paint products, we decorated the full interior of this new building comprising partition walls and woodwork including areas of rigitone acoustic boarding, sealing of concrete walls / columns, oak in seminar rooms, spiral feature staircase, atrium staircase and various feature ceilings.

The 6-storey atrium courtyard and feature staircase are part of 10,000 square feet of new space and forms the final phase of the award winning Potterow development.

The building will be used as a new robotics laboratory, human conditioning laboratory, offices with breakout spaces, seminar rooms and a café.

This project used a diverse range of materials and finishes to create a building that is not only highly functional but architecturally stunning.

Awarded

Winner of the Very Highly Commended Award in the New Build Category at the Painting and Decorating Associations Premier Trophy Awards 2019.

Key Facts

Project Name	University of Edinburgh Data Technology Institute (DTI)
Client	University of Edinburgh
Service	Internal decoration of new education facility
Length of Contract	11 months
