

HERITAGE CASE STUDY

BARROW HEALTH CENTRE.

Project Summary

Barrow Health Centre was half new build/half existing building. The building will be used predominately as a doctors surgery but will also have physio areas, special children's ward & a large boots pharmacy.

In the existing building high level walls including feature walls/ceilings, existing window screens which had been repaired and were listed, existing detailed cornice picked out in feature colours, skirting boards, staircases & large existing sash windows.

In the new building new walls including feature walls, woodwork, ceilings & anti slip epoxy paint concrete floors in plantroom.

When we arrived on site as a lot of the services had been fitted in the existing building making it very difficult to reach the tops of walls, we overcame this by utilising scaffolds & long reach brushes. The existing building also had damp issues within the walls so, once rectified we applied stain block to the affected areas.

Health & safety was well controlled on this project by ESH. Generally, areas were well maintained although towards the end of the project there were many areas that had been filled with materials and equipment.

Story decorating group handed over this project successfully utilising our internal handover system which we worked closely with the client on. This was maintained right the way through the job & also painted a picture as to where we were with progress each week to make sure we maintained programme.

This job was planned efficiently & ran smoothly. The finish is fantastic & looks sharp. This is definitely a project to be proud of which will serve the Barrow community & further beyond for many years to come.

Key Facts

Project Name	Barrow Health Centre
Client	ESH Construction
Service	Painting walls, ceilings, woodwork including existing heritage window screens, epoxy floors & listed external railings
Length of Contract	7 months
